• FREE PROMPT PACK

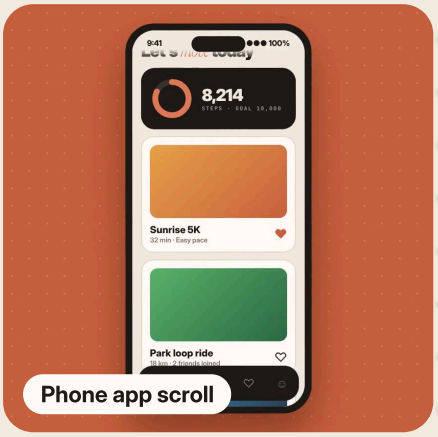

Tech demos, no *screen recording*

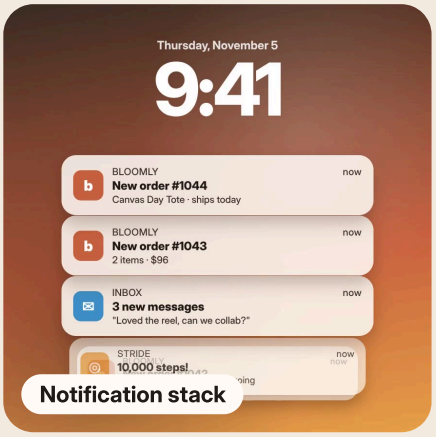

Every tech demo animation from the reel, as a copy-paste prompt. Swap the highlighted parts for your own text and you get the same style for your videos.

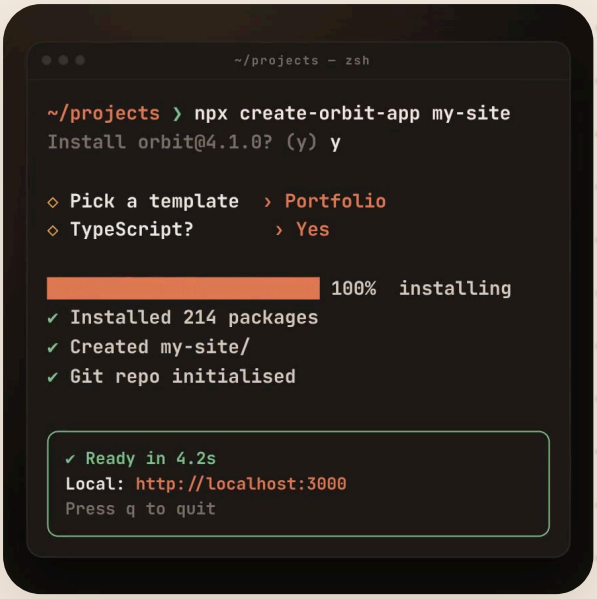

• HOW TO USE

1. Copy a prompt and paste it into Claude.
2. Replace the highlighted parts with your own content.
3. Ask Claude to preview it, then tweak ("slower", "brand colours", "vertical 9:16").
4. Screen-record the preview, or ask for it as a video you can drop into your edit.

• STYLE 01 / 05

Terminal *typing*

WHAT IT DOES

Command types · output streams · ready box

COMMAND IN THE REEL

`/terminal`

BEST FOR

Dev tutorials · Tool launches · Setup guides

• COPY THIS PROMPT

Create a 5-second square HTML animation of a dark terminal window with three window dots and a title bar. A prompt "`~/projects ❯`" types the command "`[npx create-my-app my-site]`" character by character with a blinking block cursor. Then output streams in line by line: `[two setup questions with answers]`, a progress bar filling to 100%, and green ✔ lines for `[3 completed steps]`. Finally a green-bordered box pops up: "`[✔ Ready in 4.2s · Local: http://localhost:3000]`". Monospace font, warm dark colours. One self-contained HTML file.

MAKE IT YOURS

Paste the real commands and output from your own tool or tutorial.

GO FURTHER

Ask for "a split screen: terminal on the left, the app loading in a browser on the right".

• STYLE 02 / 05

Code *editor*

WHAT IT DOES

Code writes itself · lines highlighted

COMMAND IN THE REEL

`/code-editor`

BEST FOR

Coding tips · Explainers · Code reviews

• COPY THIS PROMPT

```
Create a 5-second square HTML animation of a light code editor with file tabs, line numbers and a dark status bar. This code types itself in with syntax highlighting and a moving cursor: [PASTE YOUR CODE, ~12 lines]. When it finishes, lines [5-6] get a soft terracotta highlight with a bar on the left, and a dark tooltip pops up below them: "[✦ Suggestion: your note]". The status bar shows the cursor's line and column. One self-contained HTML file.
```

MAKE IT YOURS

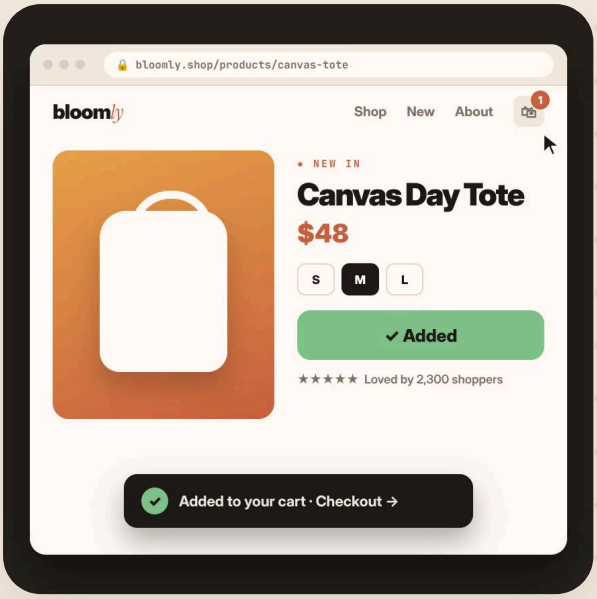

Keep the code short (10–14 lines) so it stays readable on a phone.

GO FURTHER

Ask for "a red error underline that gets fixed" or "a diff with lines removed and added".

• STYLE 03 / 05

Browser *demo*

WHAT IT DOES

Cursor clicks through a fake website

COMMAND IN THE REEL

`/browser-demo`

BEST FOR

Product demos · Store promos · How-tos

• COPY THIS PROMPT

```
Create a 5-second square HTML animation of a browser window showing a product page for a fictional shop "[SHOP NAME]" (logo, nav, product image, name "[PRODUCT]", price "[$48]", size buttons, an "Add to cart" button). An animated mouse cursor glides in, clicks size M with a ripple, then clicks "Add to cart". The button turns green and says "✓ Added", the cart badge pops from 0 to 1, and a dark toast slides up: "Added to your cart · Checkout →". One self-contained HTML file.
```

MAKE IT YOURS

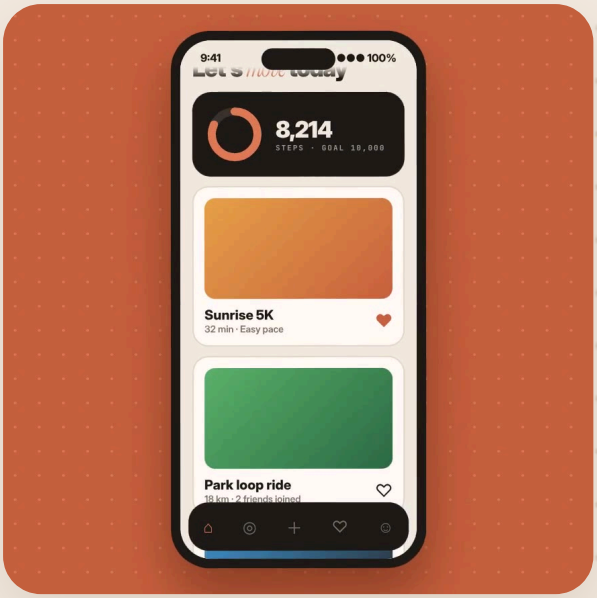

Describe your own page layout and the exact clicks you want, step by step.

KEEP IT HONEST

Use a made-up shop or your own site. Don't copy a real brand's page.

• STYLE 04 / 05

Phone app *scroll*

WHAT IT DOES

App scrolls in a phone · tap to like

COMMAND IN THE REEL

`/phone-scroll`

BEST FOR

App launches · UI showcases · Portfolios

• COPY THIS PROMPT

```
Create a 5-second square HTML animation: a dark phone mockup (rounded corners, small top pill) floats at a slight angle on a terracotta dotted background. Inside is a fictional [fitness] app home screen: a greeting "[Good morning, Sam]", a progress ring counting up to [8,214 steps], then cards with gradient images and titles. The feed scrolls down smoothly, a tap circle appears on the first card's heart and it fills red with a pop, then the feed scrolls partly back up. A dark tab bar stays fixed at the bottom. One self-contained HTML file.
```

MAKE IT YOURS

Describe your own app's screens, or paste screenshots and ask it to rebuild them.

GO FURTHER

Ask for "two phones side by side, light and dark mode".

• STYLE 05 / 05

Notification *stack*

WHAT IT DOES

Lock screen fills with notifications

COMMAND IN THE REEL

`/notifications`

BEST FOR

Hooks · Success stories · Side hustles

• COPY THIS PROMPT

```
Create a 5-second square HTML animation of a phone lock screen on a warm gradient background, with the date and a big clock "[9:41]". Notifications drop in from the top one after another with a slight bounce, newest on top, each a frosted rounded card with a coloured app icon, app name, "now", a bold title and one line of text: [6 notifications, e.g. "Payday · You got paid 💸 · $240 from Orbit Studio"]. Older cards push down and the oldest fade into a stack. One self-contained HTML file.
```

MAKE IT YOURS

Write notifications that tell a story: first sale, first fan, first payout.

KEEP IT HONEST

Use made-up app names and amounts, and don't present them as real earnings.

• BEFORE YOU GO

Make it *vertical*

All 5 prompts make square animations. For reels and shorts, add this line to the end of any prompt:

• ADD-ON

```
Make it 1080×1920 (9:16 vertical), keep all key content in the middle
1080×1350, and render it as a 30fps MP4.
```

SLOWER OR FASTER

Add "make it 8 seconds" or "make every move snappier".

YOUR BRAND

Add "use these colours: #hex, #hex" and your font name.
